

SMOOTH BORE!

Piston-style musical instruments rely on smooth, true cylinders for proper tone quality and instant note response. If a valve body becomes damaged or worn, the horn is, of course, “of no use” to the owner. Many horns with these types of problems can be saved by trueing, honing, plating, and final lapping to restore the smooth bore.

We also do complete overhauls on brass instruments and replating in Gold, Silver, Nickel and Stainless Nickel.

If you're in need of a “smooth bore,” call or email us today.
